Summary calCloud email services in Brief

Attachments Email Services.docx

Email has become a business critical application. Organizations must have the most efficient ways for their staff to communicate and collaborate with each other and their business partners. This increases the necessity of a messaging system with high performance, reliability and security. Outsourcing email support to CDT enables departments to focus on core business functions while reducing resource allocation and costs.

CALCLOUD AS IaaS

posted on 2018-02-22-00:00 by Kim

Category Cloud Based Services

Sub-Category CalCloud

Article Tags Cloud

Summary calCloud as IaaS in Brief

Attachments CalCloud Infrastructure as a Service.pdf

CalCloud - Infrastructure as a Service (IaaS) provides customers with a private cloud located at the CDT data centers. Using a self-service portal, CalCloud - IaaS customers have on-demand access to a shared pool of computing resources that can be rapidly provisioned and released as virtual machines on a pay-per-use basis. CalCloud - IaaS provides shared virtual infrastructure reduces or eliminates the need for capital expenditures and allows Customers to reduce cost savings compared to physical server environments. Options such as server management, increased storage, site-to-site virtual private network devices, backup and restore, file transfer server, RAM and infrastructure disaster recovery (IDR) are available during and after provisioning.
